CANDIDATE NAME					
CENTRE NUMBER			CANDIDATE NUMBER		

**CHEMISTRY** 

5070/02

Paper 2 Theory

October/November 2009

1 hour 30 minutes

Candidates answer on the Question Paper.

No Additional Materials are required.

#### READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a soft pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

### Section A

Answer all questions.

Write your answers in the spaces provided in the Question Paper.

#### Section B

Answer any three questions.

Write your answers in the spaces provided in the Question Paper.

A copy of the Periodic Table is printed on page 20.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

For Exam	iner's Use

This document consists of 18 printed pages and 2 blank pages.

## Section A

For Examiner's Use

Answer all the questions in this section in the spaces provided.

The total mark for this section is 45

A1 (a) Choose from the following compounds to answer the questions below.

ammonium sulfate calcium oxide copper(II) chloride ethanoic acid ethene nitrogen dioxide sodium iodide sulfur dioxide

Each compound can be used once, more than once or not at all.

Which compound

<b>(</b> i	i) may be formed when alkanes are cracked,	
		[1]
(ii	i) forms a yellow precipitate with aqueous silver nitrate,	
		[1]
(iii	i) is used as a fertiliser,	
		[1]
(iv	is a pollutant arising from lightning activity,	
		[1]
(v		
		[1]
(vi	,	[4]
(b) [	Define the term <i>compound</i> .	[1]
(D) L	reinie the term compound.	
••		[1]

For Examiner's Use	) Explain why sodium iodide will <b>not</b> conduct electricity when solid but will conduct when dissolved in water.	(c)
	[2]	
	[Total: 9]	

**A2** In the presence of yeast, aqueous glucose, C<sub>6</sub>H<sub>12</sub>O<sub>6</sub>, is changed into carbon dioxide and ethanol.

For Examiner's Use

(a) Write the equation for this reaction.

.....[1]

(b) Name this reaction.

\_\_\_\_\_[1]

(c) Suggest how the speed of this reaction varies as the temperature changes from 20 to 60 °C.

(d) Carbon dioxide is also formed when calcium carbonate reacts with hydrochloric acid.

$$\mathsf{CaCO}_3(\mathsf{s}) \ + \ 2\mathsf{HC}\mathit{l}(\mathsf{aq}) \ \longrightarrow \ \mathsf{CaC}\mathit{l}_2(\mathsf{aq}) \ + \ \mathsf{CO}_2(\mathsf{g}) \ + \ \mathsf{H}_2\mathsf{O}(\mathsf{l})$$

The graph shows how the volume of carbon dioxide changes when calcium carbonate powder reacts with excess 0.5 mol/dm³ hydrochloric acid.

On the same axes, sketch the curve you would expect when the experiment is repeated using the same amount of calcium carbonate and excess 1.0 mol/dm³ hydrochloric acid.

[2]

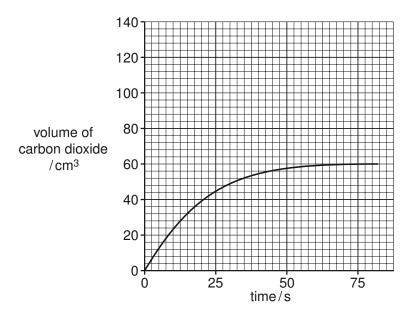

Fig. 1

[Total: 6]

А3			contains mainly nitrogen and oxygen together with small amounts of argon lioxide.	nainly nitrogen and oxygen together with small amounts of argon and For Examiner Use			
	(a)	a) State the approximate percentages of nitrogen and oxygen in dry air.					
		nitro	[1]				
	(b)	Dry					
		(i)	What do you understand by the term isotope?				
				[1]			
		(ii)	State the number of electrons and neutrons in this isotope of argon.				
			number of electrons				
			number of neutrons	[1]			
	(c)		on is used in the manufacture of titanium. In this process titanium(IV) chloride, Teduced with hot sodium. The products are titanium and sodium chloride.	ïCl <sub>4</sub> ,			
		(i)	Write an equation for the reaction between titanium(IV) chloride and sodium.				
				[1]			
		(ii)	During this reaction argon is blown over the mixture of sodium and titanium chloride.  Suggest why the reaction is carried out in an atmosphere of argon.	n(IV)			
				[4]			
				[۱]			
	(d)		mall amount of xenon is present in the air. Several compounds of xenon have the design to the second	peen			
			ompound of xenon contained 9.825g of xenon, 1.200g of oxygen and 5.700 rine.	g of			
			ermine the empirical formula of this compound.				

[3]

		Č
<b>A</b> 4		hylamine, CH <sub>3</sub> NH <sub>2</sub> , is a base which has similar properties to ammonia. en methylamine dissolves in water, the following equilibrium is set up.
		$CH_3NH_2 + H_2O \rightleftharpoons CH_3NH_3^+ + OH^-$
	(a)	Explain why methylamine behaves as a base in this reaction.
		[1]
	(b)	When aqueous methylamine is added to aqueous iron(III) chloride, a red-brown precipitate is observed. Suggest what you would observe when aqueous methylamine is added to aqueous iron(II) chloride.
		[1]
	(c)	Methylamine is a gas. Calculate the volume occupied by 6.2g of methylamine at room temperature and pressure.
		[2]
		i-1
	(d)	Methylamine is made by reacting methanol with excess ammonia under pressure in the presence of a catalyst.

$$\mathrm{CH_{3}OH} \ + \ \mathrm{NH_{3}} \ \longrightarrow \ \mathrm{CH_{3}NH_{2}} \ + \ \mathrm{H_{2}O}$$

(i) Define the term *catalyst*.

(ii) Calculate the theoretical yield of methylamine that can be obtained from 240 kg of methanol.

[2]

For Examiner's Use

[Total: 7]

	Write ar	n equation for this				
b)	The bromine is purified by treatment with sulfur dioxide.  Describe a test for sulfur dioxide.					
					[2]	
;)		e is a halogen. te the table to est	imate both the density	and boiling point of I		
		halogen	density of solid halogen in g/cm <sup>3</sup>	boiling point		
		fluorine	1.51	-188

[Total: 8]

(a)

(b)

**A6** A thin layer of ozone, O<sub>3</sub>, is present high in the Earth's atmosphere.

For
Examiner
Πca

Explain why the ozone layer is important in terms of numan health.	
	•••
	 [2]
Chlorofluorocarbons, CFCs, catalyse the conversion of ozone to oxygen. Write the equation for this reaction.	,

(c) The graphs show how both the world CFC production and the amount of high level ozone at the South Pole have changed over the last 26 years.

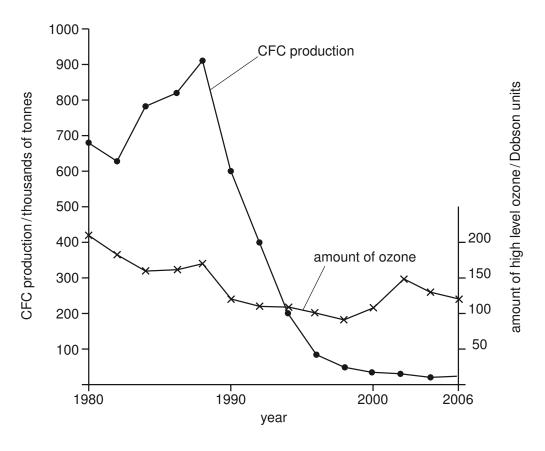

Fig. 3

(i) Describe how the world production of CFCs has changed over the last 26 years.

© UCLES 2009 5070/02/O/N/09

(ii)	What evidence, if any, is there to indicate a link between the world CFC production and the amount of high-level ozone in the atmosphere at the South Pole?	For Examiner's Use
	Explain your answer.	
	rol .	
	[2]	
	[lotal: /]	

# **Section B**

For Examiner's Use

Answer three questions from this section.

The total mark for this section is 30.

В7	Cop	oper	is purified by the electrolysis of aqueous $copper(II)$ sulfate using $copper$ electrodes.
	(a)		lain how this process is carried out in the laboratory and give relevant equations for electrode reactions.
			[4]
	(b)	Αqι	leous copper(II) sulfate can also be electrolysed using carbon electrodes.
		(i)	Write an equation for the reaction which takes place at the anode in this electrolysis.
			[1]
		(ii)	Explain why the colour of the $copper(\mathrm{II})$ sulfate solution fades during this electrolysis.
			[1]
	(c)	Cop	oper is a transition element.
		(i)	Name <b>two</b> transition elements, or compounds of transition elements, which are used as catalysts. For each catalyst name an industrial product made using the catalyst.
			[2]

For Examiner's Use	Other than acting as catalysts state <b>two</b> properties which are specific to transition elements.	(11)
	[2]	
	[Total: 10]	

**B8** Fumaric acid is a colourless solid which can be extracted from plants.

For Examiner's Use

$$\begin{array}{c} & & & & \\ & & & \\ & & & \\ & &$$

Fig. 4

(a)	Describe the reaction of aqueous fumaric acid with aqueous bromine, giving the equation for the reaction and stating any observations.
	[3]
(b)	A solution of fumaric acid was titrated against aqueous sodium hydroxide.
	$\mathrm{HO_{2}CCH=CHCO_{2}H}$ + $\mathrm{2NaOH}$ $\longrightarrow$ $\mathrm{NaO_{2}CCH=CHCO_{2}Na}$ + $\mathrm{2H_{2}O}$
	$18.0\text{cm}^3$ of $0.200\text{mol/dm}^3$ sodium hydroxide were required to neutralise $60.0\text{cm}^3$ of fumaric acid solution. Calculate the concentration, in mol/dm³, of the fumaric acid solution.
	[3]

(c)	ethane-1,2-diol, HO—CH <sub>2</sub> —CH <sub>2</sub> —OH	For Examiner's Use
	[1]	
(d)	Nylon is a condensation polymer. State <b>one</b> use of nylon.	
	[1]	
(e)	Describe <b>two</b> pollution problems caused by the disposal of non-biodegradable plastics.	
	[2]	
	[Total: 10]	

**B9** The diagram shows the carbon cycle.

For Examiner's Use

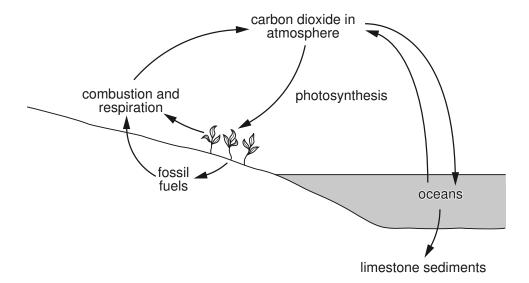

Fig. 5

(a)	Describe the process of photosynthesis in simple terms.
	[2]

(b) Draw a dot-and-cross diagram for carbon dioxide showing the outer electrons only.

[1]

(c)		Many scientists think that the burning of hydrocarbons such as octane, $C_8H_{18}$ , contributes to climate change.							
	(i)	Write an equation for the complete combustion of octane.							
	(ii)	Why do some scientists think that the burning of hydrocarbons contributes to climate change?							
		[1]							
(d)		the oceans carbon dioxide reacts with carbonate ions in seawater to form drogencarbonate ions.							
		$CO_2 + H_2O + CO_3^{2-} \rightleftharpoons 2HCO_3^{-}$							
	(i)	Microscopic plants remove carbon dioxide from the surface waters of the oceans. What effect does this have on the reaction above? Explain your answer.							
		[2]							
	(ii)	Name a carbonate compound which is soluble in water.							
		[1]							
(e)		lcium carbonate is used in flue gas desulfurisation. scribe this process and explain why it is important for the environment.							
		[2]							
		[Total: 10]							

For Examiner's Use

(c) Coke burns in oxygen to form carbon dioxide.  Explain, in terms of bond breaking and bond making, why this reaction is exothermic.	(b) E	explain, by reference to the chemical reactions involved, why limestone is used in the
(c) Coke burns in oxygen to form carbon dioxide.  Explain, in terms of bond breaking and bond making, why this reaction is exothermic.  (d) In the centre of the blast furnace iron(III) oxide, Fe <sub>2</sub> O <sub>3</sub> , is reduced by carbon monoxid to form iron and carbon dioxide. Near the bottom of the blast furnace the remaini iron(III) oxide is reduced by carbon to form iron and carbon monoxide.		explain, by reference to the chemical reactions involved, why limestone is used in the last furnace.
